Run game

Read the clues, paint the harbor. Pixel Harbor is a collection of 30 seaside picture-logic puzzles, with 5×5, 10×10 and 15×15 boards. Fill squares to reveal boats, sea creatures and other harbor pictures.

Numbers show runs of filled squares in each row and column, separated by at least one empty square. Each included board has one binary solution, independently checked. Use Fill or Mark, undo a move, clear the board or turn on mistake checking. Larger boards have a zoom control.

Click or tap to fill. Switch to Mark for empty squares; right-click or long-press is also supported. Keyboard: focus the grid, move with arrows, Space fills and X marks. Ctrl+Z undoes.

Daily Tide selects a board from the existing 10×10 collection using your device's local date. Pictures repeat through the rotation. Completing the daily board offers a text result to copy; sharing is optional.

Progress and settings stay in this browser's local storage. Clearing site data or switching browsers/devices may lose or separate progress. The game does not require an account; the hosting platform has its own privacy practices.

Suggested audience: ages 8+ and adults who enjoy number clues and spatial logic. This is design guidance, not an official age rating. Younger players may need help learning the rules.

Made with generative AI assistance for code, procedural graphics/audio and text, with human direction and independent browser/puzzle checks. Free browser edition.
